

Objectives

• solve one-step problems involving multiplication and division, by calculating the answer using concrete objects, pictorial representations and arrays with the support of the teacher.

Key Skills

Multiplication

- Count in multiples of 2, 5 and 10.
- Solve one-step problems involving multiplication, by calculating the answer using concrete objects, pictorial representations and arrays with the support of the teacher.
- Make connections between arrays, number patterns, and counting in twos, fives and tens.
- Begin to understand doubling using concrete objects and pictorial representations.

Division

- Solve one-step problems involving multiplication and division, by calculating the answer using concrete objects, pictorial representations arrays with the support of the teacher
- Through grouping and sharing small quantities, pupils begin to understand, division, and finding simple fractions of objects, numbers and quantities.
- They make connections between arrays, number patterns, and counting in twos, fives and tens.

Vocabulary

Multiplication

groups of, lots of, times, array, altogether, multiply, count

Division

share, share equally, one each, two each..., group, groups of, lots of, array

Year 1 Multiplication

Immerse children in practical opportunities to develop understanding of multiplication and division.

Year 1 Division

<u> </u>	
Н	

Immerse children in practical opportunities to develop understanding of multiplication and division.

Group and share small quantities

Using objects, diagrams and pictorial representations to solve problems involving both

grouping and sharing.

ple)

Grouping:

There are 6 strawberries altogether. How many people can have 2 strawberries each?

Sharing:

There are 6 strawberries shared between 2 people. How many do they each get?

Objectives

- recall and use multiplication and division facts for the 2, 5 and 10 multiplication tables, including recognising odd and even numbers
- calculate mathematical statements for multiplication and division within the multiplication tables and write them using the multiplication (×), division (÷) and equals (=) signs
- show that multiplication of two numbers can be done in any order (commutative) and division of one number by another cannot
- solve problems involving multiplication and division, using materials, arrays, repeated addition, mental methods, and multiplication and division facts, including problems in contexts.

Key Skills

Multiplication

- Count in steps of 2, 3 and 5 from zero, and in 10s from any number.
- Recall and use multiplication facts from the **2**, **5** and **10** multiplication tables, including recognising odds and evens.
- Write and calculate number statements using the x and = signs.
- Show that multiplication can be done in any order (commutative).
- Solve a range of problems involving multiplication, using concrete objects, arrays, repeated addition, mental methods, and multiplication facts.
- Pupils use a variety of language to discuss and describe multiplication.

Division

- Count in steps of 2, 3, and 5 from 0
- Recall and use multiplication and division facts for the **2**, **5** and **10** multiplication tables, including recognising odd and even numbers.
- Calculate mathematical statements for multiplication and division within the multiplication tables and write them using the x, ÷ and = signs.
- Show that multiplication of two numbers can be done in any order (commutative) and division of one number by another cannot.
- Solve problems involving multiplication and division, using materials, arrays, repeated addition, mental methods, and multiplication and division facts, including problems in contexts.

Vocabulary

Multiplication

groups of, lots of, times, array, altogether, multiply, count, multiplied by, repeated addition, column, row, commutative, sets of, equal groups, times as big as, once, twice, three times...

Division

share, share equally, one each, two each..., group, equal groups of, lots of, array, divide, divided by, divided into, division, grouping, number line, left, left over

Year 2 Multiplication

Use arrays to help teach children to understand the commutative law of multiplication and give examples such as $3 x_{=} 6$

Use repeated addition on a number line:

Starting from zero, make equal jumps on a number line to work out multiplication facts and write multiplication statements using x and = signs

Use practical resources, such as numicon and bead strings, alongside these methods to

Children must be able to recall and use multiplication and division facts for 2, 10 and 5 x tables

through regular practice in school and at home.

They are to begin to know 3 x table.

Year 2 Division

Sharing

Grouping

using sharing e.g. find a

the cubes into four piles.

guarter of 16 cubes by sharing

Find 1/4, 1/2, 3/4 of small quantities

 $20 \div 5 =$. Relate to 'clever counting'

Group and share using the ÷ and = sign.

Counting in steps ('clever' counting)

Count in 2s, 10s and 5s. Begin to count in 3s

Halving

Find half of numbers up to 40, including realising that half of an odd number gives a remainder of 1 or answer containing a $\frac{1}{2}$

e.g. $\frac{1}{2}$ of $11 = 5 \frac{1}{2}$ Begin to know half of multiples of 10 to 100

Written methods

Group and share

Using objects, diagrams and pictorial representations and grouping on a number line

Grouping:

There are 20 sweets altogether. They are put in bags of 5.

How many bags are there?

There are 20 sweets altogether. They are shared equally between 5 bags.

Sharing:

Begin to find half or a quarter of a quantity

Relate division to multiplication by using arrays

or towers of cubes to find answers to division.

E.g. How many towers of 5 cubes can I make

from twenty cubes? As x = 20 and also as

How many sweets are in each bag?

Grouping using a number line

Óbjectives

recall and use multiplication and division facts for the 3, 4 and 8 multiplication tables

- write and calculate mathematical statements for multiplication and division using the multiplication tables that they know, including for two-digit numbers times one-digit numbers, using mental and progressing to formal written methods
- solve problems, including missing number problems, involving multiplication and division, including positive integer scaling problems and correspondence problems where n objects are connected to m objects

Key Skills

Multiplication

Recall and use multiplication facts for the 2, 3, 4, 5, 8 and 10 multiplication tables, and multiply multiples of 10.

- Write and calculate number statements using the multiplication tables they know, including 2-digit x singledigit, drawing upon mental methods, and progressing to reliable written methods.
- Solve multiplication problems, including missing number problems.
- Develop mental strategies using commutativity (e.g. $4 \times 12 \times 5 = 4 \times 5 \times 12 = 20 \times 12 = 240$)
- Solve simple problems in contexts, deciding which operations and methods to use.
- Develop efficient mental methods to solve a range of problems e.g. using commutativity and for missing number problems _ x 5 = 20, 3 x _ = 18, _ x _ = 32.

Division

Recall and use multiplication and division facts for the 2, 3, 4, 5, 8 and 10 multiplication tables (through doubling, connect the 2, 4 and 8s).

- Write and calculate mathematical statements for multiplication and division using the multiplication tables that they know, including for two-digit numbers times one-digit numbers, using mental and progressing to formal written methods.
- Solve problems, in contexts, and including missing number problems, involving multiplication and division.
- Pupils develop efficient mental methods, for example, using multiplication and division facts.
- (e.g. using 3 × 2 = 6, 6 ÷ 3 = 2 and 2 = 6 ÷ 3) to derive related facts (30 × 2 = 60, so 60 ÷ 3 = 20 and 20 = 60 ÷ 3).
- Pupils develop reliable written methods for division, starting with calculations of 2-digit numbers by 1-digit numbers and progressing to the formal written method of short division.

Vocabulary Multiplication

groups of, lots of, times, array, altogether, multiply, count, multiplied by, repeated addition, column, row, commutative, sets of, equal groups, times, _times as big as, once, twice, three times..., partition, grid method, multiple, product, tens, units, value

Division

share, share equally, one each, two each..., group, equal groups of, lots of, array, divide, divided by, divided into, division, grouping, number line, left, 'carry', left over, inverse, short division, remainder, multiple

Year 3 Multiplication

Mental Strategies

Counting in steps ('clever' counting)

Count in 2s, 3s, 4s, 5s, 8s, and 10s

Doubling

Know doubles to double 20.

Know doubles of multiples of 5 to 100 48

using partitioning e.g. double 48

Find doubles of numbers to 50

Grouping

Recognise that multiplication is commutative e.g. 4x8=8x4 3x4=4x3 4x11=11x4.

Multiply multiples of 10 by 1-digit numbers using known number facts e.g. $3 \times 8=24$ so I know $3 \times 80 = 240$ as 80 is ten times bigger than 8.

4x3=12 so I know that 4x30=120 as 30 is ten times bigger than 3.

Written methods

Multiply 2-digits by a single digit number

Introduce the grid method for multiplying 2 digit by single-digits. Make the link between an array and the grid method, discussing how they are similar and different.

3	X	2	7	II	8	1			
X	2	0		7			6	0	
3	6	0	2	1		+	2	1	
							8	1	

8	X	5	4	()	4	3	2			
×	5	0		4			4	0	0	
8	40	00	3	2		+		3	2	
							4	3	2	
					6					

In order to carry out this method, children must be able to:

- •Partition numbers into tens and ones
- •Multiply multiples of ten by a single digit (e.g. 20 x 4) using their knowledge of multiplication facts and place value
- •Recall and work out multiplication facts in the 2, 3, 4, 5, 8 and 10 times tables.

Children must be able to recall multiplication and division facts for 2, 3, 4, 5, 8 and 10 times tables through regular practice in school and at home. They are to recognise the relationships between multiplication and division.

E.g. $3 \times 8 = 24$ $24 \div 8 = 3$ $8 \times 3 = 24$ $24 \div 3 = 8$

Year 3 Division

Group and share using the + and = sign. Using number facts Know half of even numbers to 40 Counting in steps Know half of multiples of 10 to 200 ('clever' counting) e.g. half of 170 is 85 Count in 2s,10s,5s,3s,4s,8s Grouping Recognise that division is not Halving commutative 54 Children find half of e.g. 16 ÷ 8 does not equal 8 ÷ 16 25+2 = 2 7 an even number to Relate division to multiplications with missing 100 using partitioning. 54 numbers, e.g. _ × 5 = 30 is the same calculation as Some children may $30 \div 5 =$ thus we can count in 5s to find the 40+10 need to further answer partition initially to half 20+5+ 2 = 27 Divide multiples of 10 by 1-digit numbers e.g. 240 ÷ numbers such as 50. 8 = 30 because 24 \div 8=3 and 240 is ten times bigger than 24 Written methods Divide 2-digit numbers by a single digit

Step 1: Grouping on a number line

Children continue to work out unknown division facts by grouping on a number line from zero.

They are also taught the concept of **remainders**, as in the example. This should be introduced practically and with arrays, as well as being translated to a number line. Children should work towards calculating some basic division facts with remainders mentally for the 2s, 3s, 4s, 5s, 8s and 10s.

Step 2: Grouping on a number line

Divide on a number line using multiple groups of the divisor.

Children to make the first jump the largest possible using known facts e.g. 'I know there are two 4's in 8 so there are twenty 4's in 80.' Then calculate what is left to make the final jump. e.g. how many 4's are in 4? I know there is one 4.

Once secure on answers with whole numbers, they then move onto questions with remainders.

Year 4 Multiplication and Division

Óbjectives

- recall multiplication and division facts for multiplication tables up to 12 × 12
- use place value, known and derived facts to multiply and divide mentally, including: multiplying by 0 and 1; dividing by 1; multiplying together three numbers
- recognise and use factor pairs and commutativity in mental calculations
- multiply two-digit and three-digit numbers by a one-digit number using formal written layout
- solve problems involving multiplying and adding, including using the distributive law to multiply two digit numbers by one digit, integer scaling problems and harder correspondence problems such as n objects are connected to m objects.

Key Skills

Multiplication

- Count in multiples of 6, 7, 9, 25 and 1000.
- Recall multiplication facts for all multiplication tables up to 12 x 12.
- Recognise place value of digits in up to 4-digit numbers
- Use place value, known facts and derived facts to multiply mentally, e.g. multiply by 1, 10, 100, by 0, or to multiply 3 numbers.
- Use commutativity and other strategies mentally $3 \times 6 = 6 \times 3$, $2 \times 6 \times 5 = 10 \times 6$, $39x7 = 30 \times 7 + 9 \times 7$.
- Solve problems with increasingly complex multiplication in a range of contexts.
- Count in multiples of 6, 7, 9, 25 and 1000.
- Recognise the place value of each digit in a four-digit number (thousands, hundreds, tens, and ones).

Division

- •Recall multiplication and division facts for all numbers up to 12 x 12.
- •Use place value, known and derived facts to multiply and divide mentally, including: multiplying and dividing by 10 and 100 and 1.
- •Pupils practise to become fluent in the formal written method of short division with exact answers when dividing by a one-digit number.
- •Pupils practise mental methods and extend this to three-digit numbers to derive facts, for example $200 \times 3 = 600$ so $600 \div 3 = 200$.
- •Pupils solve two-step problems in contexts, choosing the appropriate operation, working with increasingly harder numbers. This should include correspondence questions such as three cakes shared equally between 10 children.

Vocabulary Multiplication

groups of, lots of, times, array, altogether, multiply, count, multiplied by, repeated addition, array, column, row, commutative, groups of, sets of, lots of, equal groups, times, multiply, times as big as, once, twice, three times... partition, grid method, total, multiple, product, sets of, inverse

Division

share, share equally, one each, two each..., group, equal groups of, lots of, array, divide, divided by, divided into, division, grouping, number line, left, left over, inverse, short division, carry, remainder, multiple, divisible by, factor

Year 4 Multiplication

Mental Strategies

Using place value understanding and multiplication facts

Children to use their understanding of place value and multiplication facts for mental calculations such as 400 X 8

4 X 8 = 32, so 400 X 8 will be 100 times larger. Therefore 400 X 8 = 3200.

Understanding rules of mathematics

number facts and rules of arithmetic to

They combine their knowledge of

this equals $10 \times 6 = 60$

53 X 1 = 53; 53 X 0 = 0

solve calculations such as:

 $2 \times 6 \times 5 =$

Doubling

Find doubles to 100 and beyond using

partitioning e.g. double 126

Begin to double amounts of money

e.g. £3.50 doubled is £7

Written methods

Multiply 2 and 3-digits by a single digit number, using all multiplication tables up to 12x12

Developing the grid method, encouraging column addition to add accurately:

and	6	×	3	4	()	2	0	4				
	×	3	0		4				١	8	0	
	6	1	80	2	4			+		2	4	
									2	0	4	
									1	0	0	

7	×	1	2	3	11	8	6	1					
X	۱	0	0	2	0		3			7	0	0	
7	7	0	0	14	0	2	1		+	1	4	0	
											2	1	
		3								8	6	1	

In order to carry out this method, children must be able to:

•Approximate before they calculate in order to assess the reasonableness of their answer (e.g. to identify impossible answers)

•Recall all multiplication facts up to 12 X 12

Children must be able to recall multiplication and	d division facts for 2, 3, 4, 5, 6
--	------------------------------------

7, 8, 9, 10, 11 and 12 times tables. Through regular practise at both home and school, they are to recall all multiplication and division facts with both speed and accuracy. They are to recognise the relationships between multiplication and division:

3	X	8	[]	2	4
8	X	3	11	2	4
2	4	<u>.</u>	3	=	8
2	4	• <u>•</u>	8	=	3

Group and share using the ÷ and = sign.

Counting in steps ('clever' counting)

Count in

2s,3s,4s,5s,6s,7s,8s,9s,10s,11,12s, 25s,50s,100s and 1000s

Using number facts and place value understanding

-Know times-tables up to 12×12 and all related division facts. They are to use these derive facts.

e.g. 600 ÷ 3 = 200 can be derived from 2 x 3 = 6

-Divide multiples of 100 by 1-digit numbers using division facts e.g. 3200 ÷ 8 = 400

Halving

- Find half of even numbers to 200 and beyond using partitioning e.g. find half of 258

- Begin to halve amounts of money e.g. £9 halved £4.50

- Using halving as a strategy in dividing by 2, 4 and 8

e.g. 164 \div 4 is calculated by halving 164 twice, so 164 \div 4 = 41

Grouping

Use grouping to solve simple division mentally, e.g. $45 \div 3$, using known multiplication facts.

e.g. 45 ÷ 3 as 10 × 3 (30) and 5 × 3 (15)

Written methods

Divide up to 3-digit numbers by a single digit

Step 1: Grouping on a number line

Divide on a number line using multiple groups of the divisor.

Model jotting down useful multiplication facts e.g. 10 x 50x 100x

Children to make the first jump the largest possible using known facts e.g. 'I know there are five 6's in 30 so there are fifty 6's in 300.'

Then calculate what is left to make the final jump. e.g. 'How many 6s are in 56? I know there are nine 6's in 54.' They identify the remainder ('How much is left over that we can't divide by 6?')

Children to circle the 'lots of'.

Year 5 Multiplicationand Division

Objectives

• identify multiples and factors, including finding all factor pairs of a number, and common factors of two numbers

- know and use the vocabulary of prime numbers, prime factors and composite (non-prime) numbers
- establish whether a number up to 100 is prime and recall prime numbers up to 19
- multiply numbers up to 4 digits by a one- or two-digit number using a formal written method, including long multiplication for two-digit numbers
- multiply and divide numbers mentally drawing upon known facts
- divide numbers up to 4 digits by a one-digit number using the formal written method of short division and interpret remainders appropriately for the context
- multiply and divide whole numbers and those involving decimals by 10, 100 and 1000 recognise and use square numbers and cube numbers, and the notation for squared (²) and cubed (³)
- solve problems involving multiplication and division including using their knowledge of factors and multiples, squares and cubes
- solve problems involving addition, subtraction, multiplication and division and a combination of these, including understanding the meaning of the equals sign
- solve problems involving multiplication and division, including scaling by simple fractions and problems involving simple rates.

Key Skills

Multiplication

- Identify multiples and factors, using knowledge of multiplication tables to 12x12.
- Solve problems where larger numbers are decomposed into their factors.
- Multiply and divide integers and decimals by 10, 100 and 1000.
- Recognise and use square and cube numbers and their notation.
- Solve problems involving combinations of operations, choosing and using calculations and methods appropriately.

Division

- Recall multiplication and division facts for all numbers up to 12 x 12 (as in Y4).
- Multiply and divide numbers mentally, drawing upon known facts.
- Identify multiples and factors, including finding all factor pairs of a number, and common factors of two number.
- Solve problems involving multiplication and division where larger numbers are decomposed into their factors.
- Multiply and divide whole numbers and those involving decimals by 10, 100 and 1000.
- Use the vocabulary of prime numbers, prime factors and composite (non-prime) numbers.
- Work out whether a number up to 100 is prime, and recall prime numbers to 19.
- Divide numbers up to 4 digits by a one-digit number using the formal written method of short division and interpret remainders appropriately for the context.
- Use multiplication and division as inverses.
- Interpret non-integer answers to division by expressing results in different ways according to the context, including with remainders, as fractions, as decimals or by rounding

(e.g. $98 \div 4 = 24 \text{ r} 2 = 241/2 = 24.5$ which would round to 25 in certain contexts).

• Solve problems involving combinations of all four operations, including understanding of the equals sign, and including division for scaling by different fractions and problems involving simple rates.

Vocabulary Multiplication

groups of, lots of, times, array, altogether, multiply, count, multiplied by, repeated addition, column, row, commutative, sets of, equal groups, _times as big as, once, twice, three times..., partition, grid method, carry, total, multiple, product, inverse, square, factor, integer, decimal, short/long multiplication,.

Division

share, share equally, one each, two each..., group, equal groups of, lots of, array, divide, divided by, divided into, division, grouping, number line, left, left over, inverse, short division, carry, remainder, multiple, divisible by, factor, inverse, quotient, prime number, prime factors, composite number (non-prime)

Year 5 Multiplication

Grouping

Multiply whole numbers and decimals by 10, 100, 1000 e.g. $3.4 \times 100=340$ Use partitioning to multiply 'friendly' 2 and 3-digit numbers by 1-digit numbers Use partitioning to multiply decimal numbers by 1-digit numbers e.g. 4.5×3 as $4 \times 3 = 12$ and $0.5 \times 3 = 1.5$ 12 + 1.5 = 13.5

Children to recall and apply multiplication and division facts up to 12 x 12 (with speed and accuracy)

Doubling and halving

Double amounts of money using £6.73 partitioning. Use doubling and £12 £1.46 halving as a strategy in £13.46 multiplying by 2, 4, 8, 5 and 20

Using number facts

Use times-tables facts up to 12×12 to multiply multiples of 10 or 100 e.g. $4 \times 6 = 24$ so $40 \times 6 = 240$ and $400 \times 6 = 2400$ Use knowledge of factors and multiples in multiplication e.g. 43×6 is double 43×3 e.g. 28×50 is half of 28×100 = 2800. So $28 \times 50 = 1400$ Know square numbers and cube numbers

Written methods

Multiply up to 4-digits by 1 or 2-digits

When first introducing the short multiplication method, children should discuss the similarities and differences between the grid method and short multiplication.

Step 1 - short multiplication for multiplying by 1 digit

Children are to cross out the 'carried' value (the exchanged value) once it has been included in the calculation.

• Step 2 - long multiplication for multiplying by 2-digits.

To initially begin with simpler calculations such as 327 X 14, then moving towards more complex ones such as 3265 X 24 once confident.

If children become insecure in these methods at any time, they can revisit the grid method (see Year 4 method) to help secure their understanding of place value before moving back onto the short or long multiplication method.

Year 5 Division

Halving

Half amounts of money using partitioning eg half of £14.84 is half of £14 (£7) plus half of 84p (42p)

£14·84 27 42p £7·42

Using halving as a strategy for dividing by 2, 4,8

Using number facts

Use division facts from the times tables up to 12×12 to divide multiples of powers of 10 of the divisor *e.g.* 3600 ÷ 9 using 36 ÷ 9

Know square numbers and cube numbers.

Grouping

Divide numbers by 10, 100, 1000, to obtain decimal answers with up to 3 decimal places e.g. $340 \div 100 = 3.4$

Written methods

Divide up to 4-digits by a single digit, including those with remainders

Step 1: Introduce short division when children are secure with long division (chunking) dividing by a single digit . Start with carefully selected examples requiring no calculating of remainders at all.

Remind children of correct place value, that 96 is equal to 90 and 6, but in short division, pose:

- How many 3's in 9? = 3, and record it above the **9 tens**.
- How many 3's in 6? = 2, and record it above the 6 ones.

Step 2: Short division (2-digits) with remainders within the calculation Move on to using this method when remainders occur within the calculation (e.g. $96 \div 4$), and be taught to "carry" (to exchange) the remainder onto the next digit.

Step 3: Short division (3-digits) with remainders within the calculation Pupils move onto dividing numbers with up to 3-digits by a single digit.

Step 4: Short division (4-digits) with remainders within the calculation

Now that pupils are introduced to examples that give rise to remainder answers, division needs to have a real-life problem-solving context, where **pupils consider the meaning of the remainder and how to express it,** i.e. as a fraction, a decimal, or as a rounded number or value, depending upon the context of the problem.

Year 6 Multiplication and Division

Objectives

- multiply multi-digit numbers up to 4 digits by a two-digit whole number using the formal written method of long multiplication
- divide numbers up to 4 digits by a two-digit whole number using the formal written method of long division, and interpret remainders as whole number remainders, fractions, or by rounding, as appropriate for the context
- divide numbers up to 4 digits by a two-digit number using the formal written method of short division where appropriate, interpreting remainders according to the context
- perform mental calculations, including with mixed operations and large numbers
- identify common factors, common multiples and prime numbers
- use their knowledge of the order of operations to carry out calculations involving the four operations
- solve problems involving addition, subtraction, multiplication and division
- use estimation to check answers to calculations and determine, in the context of a problem, an appropriate degree of accuracy.

Key Skills

Multiplication

- Recall multiplication facts for all times tables up to 12 x 12 (as Y4 and Y5).
- Multiply multi-digit numbers up to 4-digit x 2-digit using long multiplication.
- Perform mental calculations with mixed operations and large numbers.
- Solve multi-step problems in a range of contexts, choosing appropriate combinations of operations and methods.
- Estimate answers using round and approximation and determine levels of accuracy.

Division

- Recall and use multiplication and division facts for all numbers to 12 x 12 for more complex calculations.
- Divide numbers up to 4 digits by a two-digit whole number using the formal written method of long division, and interpret remainders as whole number remainders, fractions, or by rounding, as appropriate for the context. Use short division where appropriate.
- Perform mental calculations, including with mixed operations and large numbers.
- Identify common factors, common multiples and prime numbers.
- Use estimation to check answers to calculations and determine accuracy, in the context of a problem.
- Use written division methods in cases where the answer has up to two decimal places.
- Solve problems which require answers to be rounded to specified degrees of accuracy.

Vocabulary Multiplication

groups of, lots of, times, array, altogether, multiply, count, multiplied by, repeated addition, array, column, row, commutative, sets of, equal groups, times as big as, once, twice, three times... partition, grid method, total, multiple, product, inverse, square, factor, integer, decimal, short / long multiplication, carry, tenths, hundredths, decimal

Division

share, share equally, one each, two each..., group, equal groups of, lots of, array, divide, divided by, divided into, division, grouping, number line, left, left over, inverse, short division, carry, remainder, multiple, divisible by, factor, inverse, quotient, prime number, prime factors, composite number (non-prime), common factor

Year 6 Multiplication

Mental Strategies

Grouping

Use partitioning as a strategy in mental, as appropriate E.g. 3060×4 as $3000 \times 4 = 12,000$ and $60 \times 4 = 240, 12,000+240 = 12,240$ E.g. 8.4×8 as $8 \times 8 = 64$, and $0.4 \times 8 = 3.2, 64 + 3.2 = 67.2$ Use factors in mental multiplication E.g. 421×6 as $421 \times 3 = 1263$ doubled = 2526

Doubling and halving

Double decimal numbers with up to 2 places using final partitioning

Using number facts

Use times tables facts up to 12x12 in mental multiplication of large numbers or with numbers with up to 2 decimal places E.g. 6 x 4 = 24, 0.06 x 4 = 0.24

Written methods

Where appropriate, alternative test techniques will be taught.

Short and multiplication with up to 2 decimal places by a single digit Children to use methods in a range of contexts, including multiplying money and measures and multiplying decimals with up to 2 decimal places by a single digit.

3	6	•4	×	0	• 7			
	3	6	4					
		×	7					
2	5	4	8		5	÷.	10	0
	#	2			~			
2	5	•4	8					

• Short multiplication for multiplying by 1 digit Use short multiplication to multiply numbers with more than 4digits by a single digit.

• Long multiplication for multiplying by 2-digits Use long multiplication to multiply numbers with at least 4 digits by a 2-digit number.

Multiplication of numbers with up to 2 decimal places

When multiplying involving decimals, remove the decimals before completing the calculation and then put the decimal place back into the answer using an understanding of place value.

Year 6 Division

Halving

Halve decimal numbers with up to 2 places using partitioning e.g. half of 36.86 is half of 36 (18) plus half of 0.86 (0.43)

Using number facts

Use division facts from the times-tables up to 12 × 12 to divide decimal numbers by 1-digit numbers e.g. $1 \cdot 17 \div 3$ is 1/100 of 117 \div 3 = 39 Know tests of divisibility for numbers divisible by 2, 3, 4, 5, 9, 10 and 25

Grouping

Divide numbers by 10, 100, 1000, to obtain decimal answers with up to 3 decimal places *e.g.* $340 \div 100 = 3.4$

Written methods

Divide at least 4-digits by both single digit and 2-digit numbers (including decimal numbers)

Where appropriate, alternative test techniques will be taught.

Short division for dividing by a single digit

Short division with remainders: Children should continue to use this method, but with numbers to at least 4 digits, and understand how to express remainders as fractions, decimals, whole number remainders, or rounded numbers. Real life problem solving contexts need to be the starting point, where children have to consider the most appropriate way to express the remainder.

6497 ÷ 8

Calculating a decimal remainder: In this example, rather than expressing the remainder as **r 1**, a decimal point is added after the ones because there is still a remainder, and the one remainder is carried onto zeros after the decimal point (to show there was no decimal value in the original number). Keep dividing to an

appropriate degree of accuracy for the problem being solved.

Long division for dividing by 2-digits

Find out 'How many 36s are in 972?' by subtracting 'chunks' of 36, until zero is reached (or until there is a remainder).

lifere is a remainder).		28 r 12 or 12 or 4
Teach children to write a useful list	36 972	$\frac{201}{15}$ 12 01 $\frac{15}{15}$ 01 $\frac{5}{5}$
first at the side that will help them	<u>-720</u> = 36 x(20)	13 432 300 - 15 x 20
decide what chunks to use,	252	<u>-300</u> – 13 X 20 132
e.g.: Useful list: 1x is 36	<u>-180</u> = 36 x(5)	$-120 - 15 \times 8$
10x is 360	72	<u>-120</u> = 13 × 0
100x is 3600	$\frac{-72}{0} = 36 \times (2)$	12
	0
